

NEW WELL APPLICATIONS

When you have tanks and flow lines in place and completion underway, the next decision you make will have a profound effect on the profitability of your new oil wells. As you consider lifting technologies, you will evaluate up-front costs, reliability, maintenance, labor costs and many other factors. When given the opportunity to open a new well, many operators are choosing the proven, value-driven lifting solutions from NOJAK.

Designed to optimize oil production, NOJAK Pumps deliver continuous, virtually maintenance free lifting with a fraction of the labor costs of beam pumps. NOJAK Pumps are bringing unprecedented profitability to well operators large and small.

Eliminate daily and unexpected maintenance issues

With no above ground moving parts or downhole parts to wear out, NOJAK pumps free you from unexpected equipment repairs and expenses.

Dramatically reduce labor expenses

NOJAK pumps deliver continuous lifting with a proven record of 99% uptime. That track record means far less labor and insurance expenses.

Efficient, safe operation

NOJAK pumps have eliminated the risk of spills resulting from high pressure generated by flow obstruction. And, no moving parts means no accidents. The technology requires less chemicals and energy to operate and is effective underground or underwater.

Fully guaranteed, with financing available

NOJAK brings you the industry's best one-year downhole and technology warranty. We also back up our belief in the system and your ability to profit from it by providing 100% financing.

Rigorously field-tested for five years, based on tough, reliable and proven technology, NOJAK Pumps are revolutionizing the oil and gas industry. Think NOJAK Pumps for your new well operation.
