

An untapped reserve is an exciting proposition, but there are many decisions you will make to bring a brand new well to life. NOJAK consultants will be with you every step of the way, bringing all their experience to your new venture. The success stories are astounding. New wells based on the proven NOJAK system can be generating profits from the first day of operation. While for obvious reasons, we cannot guarantee the profitability of any well, the low lifting cost per barrel you can achieve with NOJAK is virtually impossible to realize with any competing technology.

We will design a system for you and supervise all installation, using the best materials modern technology has to offer. Our engineers will work with you to develop the optimum system for your oil and gas well applications.

- **Completion services**  
We will install all downhole components - the maintenance-free, non-corrosive NOJAK system. With no downhole precision parts to wear out, NOJAK pumps free you from unexpected equipment issues.
- **Tanks and Flow lines**  
Our team will install your tanks and flow lines to work perfectly with the NOJAK compressor. No above ground moving parts means virtually no maintenance and dramatically reduced labor costs.
- **Fully guaranteed, with financing available**  
NOJAK brings you the industry's best one-year downhole and technology warranty. We also back up our belief in the system and your ability to profit from it by providing 100% financing.

We want your start up oil or gas well installation to succeed, and we want you to be immediately profitable and continue to generate profits for years to come. Call us to discuss the exciting opportunity you have.
